FORAGE RYE (*SECALE CEREALE*)

POWERGREEN

Winter forage rye

- Our varieties are particularly suited to winter intertillage production and are used as a substratum for biogas-/silage production. Important cultivation goals when dealing with fodder rye are to begin growing early in spring and to rapidly build up high dry matter yields. Fodder rye will then provide strong stocking, abundant vegetative growth and high growth length.

Advantages of POWERGREEN

- High dry matter yields & raw protein content
- Low tendency to lodging
- Rapid tillering in autumn combined with an early growth in spring
