

PERENNIAL RYEGRASS (*LOLIUM PERENNE*)

FERRIS (M)

Ploidie: tetraploid

Maturity group: very early (1)

Listing: since 2016

Advantages of FERRIS (M)

- › Exceedingly low susceptibility to rust, mildew and bacterial wilt
- › Low tendency to lodging and winter kill – high security of yield
- › Leafy regrowths for high dry matter yields and productive silages

Variety assessment of FERRIS (M)

Mass growth at the beginning		strong
Tendency to winter kill		low to medium
Tendency to lodging		medium
Susceptibility to rust		low to medium
Persistence		medium to high
Sward density		medium
Dry matter yield, total		medium
Dry matter yield, 1st cut		low to medium
Dry matter yield, further cuts		high

(1 = very low, very early / 9 = very strong, very high, very late)

Source: according to the specifying variety list 2024 issued by the Bundessortenamt

Variety descriptions above are provided to the best of our knowledge. Despite all efforts, SAATZUCHT STEINACH GmbH & Co KG cannot guarantee repeatability of described assessments in any case. The presented results should provide an appropriate knowledge base for decision support and may not be an indicator of results you may obtain in your individual location, as local growing conditions, including soil type and weather may vary. SAATZUCHT STEINACH GmbH & Co KG excludes all liability for damages which may arise from use of this variety description.
